Finavia Selects EIZO FlexScan Monitors for
Helsinki-Vantaa Airport and Area Control Center in Tampere

Hakusan, Japan, October 27, 2010 – Finavia has chosen FlexScan monitors from Eizo Nanao Corporation (TSE: 6737) for its Freshup project to upgrade and harmonize the hardware and software used in its ATC systems. The monitors are being installed in the approach control center in Helsinki-Vantaa and the area control center in Tampere.

Finavia initially selected EIZO in February of this year. After the first installation was completed in June, Finavia recognized the improvements in efficiency these monitors were providing to their operations and placed a second order in September. The second installation is scheduled for completion by the end of this year.

For both sites, EIZO is supplying the 30-inch FlexScan SX3031W, the 24-inch FlexScan S2433W, and the 19-inch FlexScan S1932. The FlexScan SX3031W is serving as a primary control monitor and the other FlexScan models as auxiliary monitors.

"We initially chose EIZO monitors for their excellent results in our internal tests as well as EIZO's reputation for building reliable monitors" said Hannu Lehmusto, data processing manager at Finavia. "We found the products fully met our expectations and are confident they will continue to do so once the next installation is complete."

About EIZO
Eizo Nanao Corporation is a leading global manufacturer of high-end visual display products with a wide range of LCD monitor systems. The image quality, long-term reliability, and innovative features of EIZO monitors make them the products of choice in many ATC centers, financial trading rooms, hospitals, back offices, and design studios. EIZO is based in Japan and represented in more than sixty countries by a network of exclusive distributors.
