

## EIZO to Introduce Ultra-Thin 19" Monitor with 7 mm Side Bezels at CeBIT 2006

Hakusan, Japan, February 24, 2006 – Eizo Nanao Corporation (“EIZO”) today announced that it will unveil the FlexScan S1961, an ultra-thin 19-inch monitor with a side bezel width of just 7 mm, at CeBIT 2006 in Hannover, Germany.

The FlexScan S1961 will be EIZO’s slimmest 19-inch monitor to date with a bezel width on the sides 50% less than its current products. For multi-monitor environments, this significantly reduces the distance between screens thereby saving space on the desktop.

The FlexScan S1961 provides brilliant images with 250 cd/m<sup>2</sup> brightness and 1500:1 contrast ratio at a native resolution of 1280 × 1024. Viewing angles are 178° so text and images are still clear when viewed from off-center. Color control adjustments offered in the OSD menu include gamma, color temperature, and gain.

The design benefits extend beyond the bezels; the stand offers tilt and swivel angles of 30° and 70° and a height adjustment range of 100 mm. The screen also pivots 90° into portrait orientation for viewing text documents or web pages. The panel houses the power supply unit and can be removed from the stand for arm or wall mounting in accordance with VESA standards. For customers with their own mounting solutions, a free-mount version (no stand) is also available.

### Additional Features

- Digital and analog input terminals.
- Three viewing modes for office applications (Text mode), web browsing (sRGB mode) and individual user settings (Custom mode).
- BrightRegulator function which adjusts the screen brightness in accordance with changes in the ambient brightness.
- 5—year manufacturer’s warranty.\*
- Cabinet color in gray or black.

CeBIT 2006 will be held in Hannover, Germany from March 9 – 15. EIZO will be located in Hall 25 Stand C22.
