

EIZO Receives FDA 510(k) Clearance from US FDA for All RadiForce Series Monochrome Medical Display Systems

Matto, Japan, September 12, 2003 – Eizo Nanao Corporation (“EIZO”) announced today that it has received 510(k) clearance from the U.S Food and Drug Administration for all monochrome monitors in its RadiForce series of medical display systems. The RadiForce G51, G31, and G11 are the latest models to receive approval, and join the FC-2091, G21, and G20, which were given clearance earlier this year.

“Having already received European CE Mark approval for these products, we are especially pleased that we now have US FDA 510(k) clearance as well,” said Kunihiro Arata, general manager of Eizo Nanao Corporation’s Overseas Sales & Marketing Department. “This allows us to begin marketing these products in the US as medical devices, and will be of benefit internationally as many hospitals worldwide look for FDA 510(k) clearance when purchasing medical equipment.”

EIZO’s RadiForce series consists of 1, 2, 3 and 5 megapixel LCD monitors in monochrome and color* – a lineup which takes into full account medical institutions’ needs for different types of monitors with different performance capabilities. Available in various sizes and configurations, they provide the versatility to carry out multiple imaging tasks, as well as the consistent, stable image quality required for confident appraisal and diagnosis.

About EIZO

Eizo Nanao Corporation is a leading global manufacturer of high-end visual display products with a wide product range that includes LCD, CRT, and PDP monitors, and Windows-Based Terminals (thin clients). The image quality, long-term reliability, and innovative features of EIZO monitors make them the product of choice in many financial trading rooms, hospitals, back offices, and design studios throughout the world. EIZO is based in Japan and represented in over thirty countries by a network of exclusive distributors.
